

Plastics and Petrochemical Storage Performance

Columbian TecTank silos are manufactured to the design parameters best suited for plastic resins storage. Designed to resist funnel or mass flow material patterns, with center fill and center discharge, CTT silos combine mass production economies with custom fabrication performance.

Features

CTT silos have the design parameters, quality system welding procedures, baked on coating systems and accessories that are specified most often for plastic resins storage applications. Engineered for your specific site and system requirements, Columbian TecTank silos are mass produced with unmatched performance.

Standard silo accessories includes:

- 20" center fill dome with cover plate
- 4" stub nozzle in center dome
- 12" diameter flanged discharge outlet
- Low level indicator (above springline) opening
- Yo-yo flange nozzle in deck with cover
- High level indicator opening in the deck
- Deck perimeter guardrail
- 20" combination manway/ventilator
- 4" pipe support brackets
- 3' x 6'8" access door with single louver
- Lifting lugs (4)
- Cast-in-place anchor bolts or Hilti style
- Standard engineering drawings with calculations

Our factory baked coating systems include a choice of FDA epoxy or polyamide epoxy for the tank interior. A baked acrylic enamel over polyamide epoxy primer gives the exterior a high gloss finish that will keep maintenance costs low. There is no more cost-efficient solution for plastic resins storage than welded steel silos from Columbian TecTank.

- Factory-Applied Interior and Exterior Coatings Provide More Protection Against Corrosion than Field-Painted Tanks.
- Interior Coating Systems Include Our Exclusive Trico-Bond EP® and AR-Lon6100®, which promote better product flow
- Delivery Time is Shorter and More Reliable than Any Other Source
- ISO 9001 quality system certified
- Leading Manufacturer of Storage Silos for the Plastic Resins and Petrochemical Industries
- Wide Range of Options for Bolted and Welded Silos in Sizes Up to 900,000 Cubic Feet
- Engineered to Meet Internationally Recognized Standards
- Most Cost-Efficient Solution for Plastics and Petrochemical Storage
- AWS & ASME certified welding
